

Blue iQ increases range confidence and route efficiency

Smart Gauge is your dashboard control panel for Blue iQ

Cummins integration makes switching to natural gas easy

Blue iQ tools prevent downtime and help repairs go smoothly

Driver Feedback and Vehicle Range Monitor maximize your efficiency

Blue iQ uses proprietary technology developed through Agility's partnership with Cummins to give natural gas vehicles the same tools diesel trucks use to optimize fuel consumption and maximize uptime.

Connected Diagnostics™ transmits key telematics, like engine and GPS data, wirelessly to Cummins for analysis and service recommendations.

INSITE™ service tool provides quick and easy access to engine and fuel system performance and diagnostic data.

QuickServe® support gives fast access to Agility parts and Agility-certified technicians.

Smart Gauge dashboard control center where drivers access key data and Blue iQ tools.

Driver Feedback monitors, analyzes, and shares data to help drivers manage trip fuel economy.

Vehicle Range Monitor tells drivers how far they can go with the gas on board.

EcoMode maximizes range at low fuel levels to avoid unplanned refueling.

Limp Home Mode gets drivers safely out of traffic at extremely low fuel levels.

Cold Start Logic ensures no downtime on cold mornings.

Connected Diagnostics, INSITE, and QuickServe are trademarks of Cummins Inc.

Natural gas vehicles have quieter engines and less emissions. Operating them is healthier for you and those in the communities you travel through. Yet a lot of drivers are hesitant to make the switch from diesel. You've told us your biggest concerns are running out of fuel and having to stop for unplanned refueling. Blue iQ changes all of that. It uses proprietary technology developed through Agility's partnership with Cummins to give natural gas vehicles all the fuel management tools you're used to with diesel, along with a cleaner and less noisy ride.

Increase Your Efficiency

Blue iQ has tools to optimize the use of fuel on board and reduce unplanned refueling to ensure you finish your route confidently and efficiently. On the dashboard you'll find the Smart Gauge control panel with tools like Driver Feedback and Vehicle Range Monitor. Manage your trip economy, shifting, and cruise control use while always knowing how far you can go with the fuel on board. Plus, there's Limp Home Mode that makes sure you can safely get out of traffic if the fuel level gets extremely low.

Maximize Your Uptime

All fuel system manufacturers have access to on-board diagnostic data, but only Blue iQ takes it further by integrating with familiar Cummins products that can prevent problems and take the pain out of those that happen. Connected Diagnostics™ telematics are sent to Cummins in seconds for analysis and recommendations, which alerts fleet managers to potential issues before they become problems. Agility's EcoMode gives managers the ability to keep problems from getting worse and Cold Start Logic ensures you start up right away on cold mornings.

Reduce Repair Hassles

Diagnosing problems on natural gas vehicles used to be time consuming, but Blue iQ changes that. The Cummins INSITE™ service tool delivers quick and easy access to engine and fuel system performance and diagnostic data, and QuickServe® support gives fast access to parts and service. In partnership with Cummins, we are working toward having an Agility-certified technician in all their service centers. Now you can be confident that when your truck arrives someone will be able to fix it.
